OilQuick delivers quick coupler systems to the Swedish Defence Materiel Administration

The Swedish Defence Materiel Administration, FMV, has placed a large order of Volvo wheel loaders and excavators from Swecon. These machines will be usable for international missions. All the excavators will be fitted with the OQ70 quick coupler system from OilQuick, and most of the wheel loaders with the OQL 300.

It was in december of last year that FMV in a government procurement requested quotations for a large number of contracting machines and attachments. After inspecting the quotations, Swecon was the chosen supplier and will deliver a number of Volvo L90F wheel loaders and EC210CL excavators. The specifications and requirements were very detailed and included among other things the ability to change hydraulic attachments directly from the drivers cab.

OilQuick will equip the excavators with an OQ 70 quick coupler as well as an OQTR 60B tiltrotator, adapter plates for hydraulic hammers, shears, crushers, screening buckets from ALLU and bush cutters from Slagkraft. The wheel loaders will be equipped with OilQuick's fully automatic quick coupler system, OQL 300 to enable changes between hydraulic pallet forks and ALLU screening buckets in seconds.
