OQ 70/OQTR 80

M Andersson Maskin AB

Magnus Andersson invested in a new 25-ton excavator, with buckets and other equipment in 2006. Earlier he used to have a 20-ton machine, but now when the excavator was heavier and in need of bigger equipment, OilQuick OQ 70 became interesting. Magnus ordered the excavator with an OQTR 80 tiltrotator and an OQ 70 quick coupler.

OilQuick was invested in for the purpose of being able to easily remove the tiltrotator when changing to a tooth bucket.

Magnus saw the whole thing as a bit of a chance:

“If the hydraulic connection doesn’t work, I guess I’ll just have to use it as a normal quick coupler with loose hoses and cables.”

It has now proven to work very well and last fall, Magnus bought a new Volvo EC 240 from Johan Henrysson, who is working at sales for Swecon in Kalmar, Sweden.

-Of course I equipped it with an OilQuick quick coupler and the new tiltrotator! I have said that I will not buy a new machine without OilQuick, that’s how good it is in my opinion!

The best capacity of the machine is utilized as the right tool is used for the right moment. The tiltrotator can easily be removed so its life span as well as fuel is saved.
