

## **ENVIRONMENTAL POLICY**

**This environmental policy summarizes OilQuick's approach to environmental impact. The policy is a key part of achieving our vision – that OilQuick shall be the natural premium choice within fully automatic quick coupler systems. We strive to be an attractive workplace where employees are driven by engagement, pride, and job satisfaction.**

This means that our value proposition must be considerate of both the climate and people, while protecting the environment. We work continuously to improve our environmental performance and to prevent pollution in order to achieve an environmentally sustainable operation.

We comply with applicable laws and other requirements and aim to be a role model in environmental management by reducing the negative environmental impact of our operations.

Our products contribute to more efficient machinery by reducing energy consumption and minimizing oil leakage. They also enable work tasks to be completed in a shorter time.

This requires continuous improvement efforts across the entire OilQuick team, including employees as well as stakeholders such as suppliers and customers.

Our objective is to operate in a resource-efficient manner and, whenever possible, to influence customers and stakeholders to reduce their environmental impact.
